VIRTUAL DESIGN CONTEST

For customers who don't have an evaluation or hardware platform or don't want to go through the expense of shipping them throughout the world, we recommend an on-line "Virtual Contest" using Scheme-it. Contestants can do the same designs on-line that they do using hardware, for less cost and effort. We will capture all your elements and put them in a unique file like circuit "Building Blocks" to make it easy for contestants to construct reference designs using only your elements.
